

MoneyMate

Empowering the Elderly with Easy and Independent ATM Access.

DESIGN AND DEVELOPED BY

Krishnaveni P

INTRODUCTION

Moneymate is a web-based project developed to help elderly individuals withdraw money from ATMs easily and safely. The website demonstrates how a companion mobile app assists users with a step-by-step withdrawal process, making banking more accessible to senior citizens.

PROJECT OVERVIEW

The website aims to simplify ATM transactions for elderly people through a secure and guided four-step process. It visually represents how the mobile app connects with ATMs, allowing users to withdraw money using preset limits and security codes. The design is clean, minimal, and easy to understand.

TARGET AUDIENCE

- Elderly people who find ATMs difficult to use
- Family members assisting seniors with banking
- Financial institutions promoting accessibility
- Designers and developers focusing on inclusive tech

TOOLS USED

- **Visual Studio Code** – for coding and editing
- **GitHub Pages** – for hosting the project
- **Git** – for version control
- **Figma** – for designing

PROGRAMMING LANGUAGES

HTML: Defines webpage structure and content.

CSS: Styles layout, color, and design.

PAGE STRUCTURE

- **Home Page:** Introduces the concept and purpose
- **How It Works:** Explains the 4-step process visually
- **Features:** Highlights accessibility and benefits

- **Contact Page:** Allows users to send feedback

FUNCTIONALITIES

- Demonstrates the ATM process flow for elderly users
- Interactive buttons and cards for navigation
- Responsive design that adjusts to screen sizes
- Encourages safe, family-assisted ATM use

CONCLUSION

Moneymate showcases how technology can make everyday banking easier for the elderly. With a simple, accessible design and guided steps, it promotes digital inclusion and independence among senior citizens.
